EXPORT SUMMARY

U.S. exports of horticultural products continued their slide in August of this year. Exports for the month were \$190 million, down 2 percent from last year. A \$9 million drop in shipments to Canada was the major factor behind the August drop. For the 11 completed months of fiscal year (FY) 1984, exports are 3.2 percent less than last year. The most favorable results have been in the Arabian Peninsula, where exports increased by 9 percent and Japan, where shipments are running close to 3 percent above last year's pace. Singapore and Hong Kong markets are holding steady, but the remaining East Asian markets recorded a disappointing 26 percent decline in export sales. The brightest spots among the commodities through August of FY 1984 were fresh vegetables, led by celery and onions, and tree nuts, led by almonds.

For further information on items in this circular, contact the Horticultural and Tropical Products Division, (202) 447-6590. All measures in this report, unless noted otherwise, are metric. One kilogram (kg)=2.2046 lbs., 1 metric ton=2,204.62 lbs., 1 liter=0.2642 gallon, and 1 hectare=2.471 acres.

*This issue of the Horticultural Product Review circular does not contain a *horticultural import table for August due to the unavailability of data at *time of publication. Import figures for August and September will appear in *next month's publication. *

MARKET ACCESS AND OPPORTUNITIES

--Brazil is now allowing the imports of apples and pears from Northern Hemisphere countries. During a September 18 meeting with the U.S. Agricultural Counselor and other U.S. officials, the International Coordinator of Brazil's Finance Ministry stated that apples and pears were removed from the suspended list on April 26, 1984 and that import licenses are now freely available. The basic duty is 32 percent ad valorem, but during August-December, 10,000 tons (from all sources) may enter paying a 15 percent duty. Latin American countries, including Argentina and Brazil, pay no duty. The United States exported only 17 tons of apples and 293 tons of pears to Brazil in 1983/84 (July-June) because of the import restrictions. In 1981/82, prior to the clampdown on imports, 3,018 tons (158,000 cartons) of apples and 3,404 tons (167,000 cartons) of pears were shipped.

--In South Korea reduced acreage and flooding have created a shortage of onions and garlic in a period leading up to the peak consumption season. A government tender for onions and garlic resulted in large purchases from Spain, the Netherlands and China. U.S. suppliers were not able to meet the specifications of this tender at a competitive price. However, future tenders for fresh onions and garlic might be required. Results of the tender opened on September 18 are as follows:

| Commodity | : Quantity | Price | Origin |
|----------------------------------|---------------------------|-------------------------------------|---|
| | :(Metric Tons) | (\$/MT) | |
| Fresh Garlic Flake Garlic Onions | : 200 : 200 : 5,000 | 730 1,620 1,768 340 340 | China, mainland China, Taiwan China, mainland Spain Netherlands |

No further import tenders for onions and garlic have been announced, although it would appear that the quantities scheduled for import will fall far short of meeting the production deficit. Shortages of onions and garlic (as well as radishes, red peppers and Chinese cabbage) will be extremely noticeable in November when most households purchase large quantities to make "kimchi", a pickled mixed vegetable preparation which is a staple in the Korean diet. For the time being, the government is reportedly allowing imports of onion and garlic powder by industrial consumers to discourage their purchase of fresh products which are in short supply. The U.S. Agricultural Trade Office in Seoul, Korea will contact local food processors and inform exporters via the trade leads system if any of the processors are in the market for U.S. onion and garlic powder. That system will also be used to report any future fresh product tenders.

MARKET PROMOTION ACTIVITIES

- --The Japanese Ministry of International Trade and Industry (MITI) is expected to announce the fresh orange import quota for the second half of the Japanese fiscal year (October-March) will be 18,500 metric tons. This will bring the total global quota for the year to 93,000 tons, the amount agreed to under the new U.S./Japan bilateral trade agreement. The quota last season was 82,000 tons.
- --There is likely to be a pre-Christmas opening for Norwegian apple imports according to trade sources. This could boost U.S. apple exports to Norway to above 6,000 tons (315,000 cartons). The United States exported 4,110 tons of apples to Norway in 1983/84.
- --Reports from Taiwan indicate the Ministry of Finance plans to lower the upper limit on import tariffs for 126 categories of items to 65 percent within five years. Tariffs on these items are to be reduced to 80 percent this year. Currently all have duties of 90 percent or more. Categories proposed for inclusion in the list include vegetable products and wine. The 126 categories, which include approximately 1,000 items, must still be approved by the Executive Yuan and the Legislative Yuan before the list of specific items is made available.
- --The Japanese Government has revised downward its estimate of the 1984 Hokkaido onion crop because of unfavorable growing conditions during July and August. The crop is now estimated at 404,100 metric tons, 40,000 tons less than previous estimates and 4 percent below the 1983 harvest of 420,800 tons. Reportedly, some Japanese importers have contracted purchases of U.S. onions at prices of \$7.00 per 20 kilogram bag, c&f for jumbo-size onions. U.S. exporters should benefit from the smaller 1984 Hokkaido crop by increased sales to the Japanese market.
- --The NTUC-Fairprice Supermarket chain in Singapore carried out an American foods promotion to coincide with the 4th of July Independence Day celebrations. This is the first time the Fairprice chain has carried out an American foods promotion. Prominently featured in all 34 stores were U.S. fruits and vegetables, wines, snack foods and canned goods. Importers of U.S. foods sponsored wine tastings, food samplings, and cooking demonstrations throughout the two-week period. Customer attendance during the promotion was very good and the individual stores reported a sales return appreciably higher than average.
- --The American Institute in Taiwan sponsored a food show June 26-28. The show, featuring hotel and restaurant equipment as well as food products, was held in the Main Hall of Chinese Television Service. This is one of the three television networks in Taiwan and helped bring extensive media coverage to the event. A visit by the 1984 Northwest Cherry Queen brought additional glamour to the show. There were 15 exhibitors representing 19 U.S. food interests which attracted almost 3,000 local representatives from Taiwan's food and food related industries. Products generating the most interest included fresh, canned, and dried fruits, wine and nuts. Taiwan's increasingly sophisticated market for food products presents many opportunities for U.S. exporters and it is hoped another show in the not too distant future can build on the successes achieved thus far.

--A U.S. food fair was carried out by the seven branches of the Firma Supermarket chain in five towns in West Malaysia. A wide range of U.S. foods including fruits and vegetables, processed foods, wines and snack foods were featured. Taste testing was carried out in all outlets at the Malaysian capital of Kuala Lumpur. Opening highlights included square dancing, a Malay cultural dance, and a break dance demonstration.

--FAS has obtained exhibit space at Saudi Food '85, an international food exhibit to be held in Riyadh, Saudi Arabia, February 10-14. Space will be available to private firms, cooperators, state and regional groups. The cost for a booth will be \$750. FAS requires that each exhibit booth represent not more than three exhibitors and each booth must have at least one commercial representative for the products exhibited. Products to be exhibited are to be sent prepaid to Bruce Transfer Corporation, 22 Lawrence Lane, N. Lawrence, New York, to the attention of Terry Saccone and must arrive no later than January 18. The cost of consolidating and air shipping to Riyadh will be \$2.00 per pound, gross weight. If you are interested in participating in the FAS 'USA' exhibit area, please contact Robert Mannion at (202) 447-7927 or Evans Browne at (202) 447-3031, or write to the Export Programs Division, Foreign Agricultural Service, USDA, Washington, D.C. 20250.

--The Foreign Agricultural Service (FAS), cordially invites U.S. food and beverage companies to participate in FOODEX Japan 85 in Tokyo International Trade Center (Harumi Pier), March 11-15, 1985. This 10th International Food exhibition is now established as the largest event of its kind in Asia. Last year over 90,000 trade buyers did business with 750 exhibitors from 16 countries. FOODEX Japan is Asia's only major specialized trade show wholly committed to the catering and food industries exclusively. U.S. exhibits will be high value and value-added products such as meats, seafood, dairy products, fruits and vegetables, bakery products and beverages, just to name a few. This exhibition offers a great, cost effective opportunity for U.S. companies to make new contacts and increase sales in this massive market. If you are interested in a booth, you can receive a participation kit by writing to: Ed Heslop, Export Programs Division, Room 4944-South Building, Foreign Agricultural Service, U.S. Department of Agriculture, Washington, D.C. 20250, or call: Ed Heslop at (202) 475-3408 or Jim Schlick at (202) 447-6343.

COMMODITY UPDATE

--Japanese imports of Florida grapefruit during 1984/85 could decline from the 6.1 million carton (117,000 tons) figure reported by Japan last season. Importers are said to have experienced significant operating losses last year due to an overall weakness in consumer demand for fruit in general, consumer apprehension over the introduction of cold-treated grapefruit shipped by Florida, and a higher than normal incidence of deterioration for warehoused fruit. Leading Japanese importers feel that grapefruit imports should not exceed 6 million cartons in order to assure profit margins. Most Japanese importers express a strong preference for receiving grapefruit treated with Ethylene Dibromide (EDB) and feel that a dependence on cold-treatment will limit shipments. More than 70 percent of all grapefruit arrivals last season occurred March-June. The Environmental Protection Agency, however, has approved the use of EDB for grapefruit exports only during October-January. It is not yet known what effect, if any, the discovery of citrus canker in Florida will have on exports to Japan.

--U.S. imports of fresh pineapple from Mexico during the first 7 months of this year were down nearly 50 percent from last year to 11,771 metric tons. The decline has been attributed to excessive rain and pest problems (nematodes) in the key pineapple producing area of Mexico. The pest problem, reportedly begun towards the end of 1983, has been aggravated because the high cost of pesticides has prevented many farmers from purchasing them. Total U.S. imports of fresh pineapple during January-July were 43,059 metric tons, down 15 percent from 1983. Honduras, Costa Rica and the Dominican Republic represented the bulk of the remaining imports.

--Australia plans to increase vegetable production to meet the growing demand of the Singapore market. A 62 hectare market garden is being developed at Jindong, near Perth in Western Australia, which will provide 2,000 tons each of cauliflower and onions and a million heads of lettuce annually for export to Singapore. In 1983, Australian exports of fruit and vegetables to Singapore were \$35 million, making Australia the fifth largest supplier to that market. During that year, Australia shipped to Singapore 3,507 tons of cauliflower (60 percent of Singapore's imports), 5,604 tons of carrots (96 percent), 1,144 tons of leafy vegetables (17 percent), and accounted for 4 percent of Singapore's onion imports.

--Brazil's citrus industry is experiencing a new wave of optimism following the outbreak of citrus canker in Florida. This is based on the belief that canker will slow the recovery of the Flordia citrus industry from the December 1983 freeze and will encourage the continuation of heavy imports of orange juice. Brazil increased the minimum export price for frozen concentrated orange juice from \$1,700 to \$1,800 per metric at 65° brix. The new price is reportedly effective for shipments made under January-March quota allotments. The new minimum export price is \$700 above the pre-December freeze level.

--The 1984/85 apple crop in the major producing countries of North America and Europe is expected to be 8 percent above the poor 1983/84 harvest. Despite large crop estimates for most countries, growing conditions in the major producing countries were less than optimal during the 1984 season. Cool, wet weather prevailed throughout most of North America and Europe during the pollination period adversely affecting yields, quality and, in some instances, fruit size. In Western Europe, maturation was delayed for approximately 2 weeks.

--The offices of the "Commission of Inquiry into Marketing Practices for the Potato Industry in Eastern Canada" were opened in Ottawa on August 24. The Commission, authorized by the Minister of Agriculture last May, was established in order to inquire into and report upon the production base of the potato industry in the provinces of Ontario, Quebec, New Brunswick, Prince Edward Island and Nova Scotia, and to make recommendations for improvements. All aspects of potato marketing are to be considered, including producer organizations and government programs in support of marketing activities. Other major areas of study will involve transportation assistance and market potential in interprovincial and export trade, pricing policies and competition in other countries. The final report of the Commission is to be presented to the Minister not later than May 31, 1986.

--Iraq's supplies of dates for export will be drastically reduced in the 1984/85 season. The President of the Iraqi Dates Authority announced that the 1984 date crop is expected to be about 115,000 tons--69 percent lower than the 1982 crop (last year for which data are available). The poor crop was attributed to bad weather, including intensive dust storms in some areas, and pest problems. The Dates Administration has announced that it will discourage the export of low-value bulk-packed dates in polyethylene bags. Emphasis will be in the export of retail-packed dates. The United States imported 1,205 tons of dried dates from Iraq in August-July 1983/84, 11 percent of total volume. Iran is the most important origin for U.S. date imports.

--Pear output in major producing countries for 1984/85 is forecast at 9 percent below last season. Pears were more severely damaged than apples by the inclement weather, particularly in the European Community and the United States where pear output is expected to be the lowest since 1978.

WORLD ALMOND SITUATION

World almond production for 1984/85 recovered from last season's low levels with an increase of 68 percent due to the record California crop. Supplies in the major producing countries of the Mediterranean, however, are down slightly due to shorter crops in Italy and Turkey and frost damage in Spain.

The combined 1984/85 season carryin of the six major producers is less than half of last season's level. The short 1983 crops in the United States and Spain, combined with relatively good movements account for the sharply reduced stock. Combined exports of the major producers are likely to show a slight growth of 5 percent over last season.

1/ Includes substandard crops diverted to oil and losses as follows: 1982, 7,243 tons; 1983, 9,118 tons; 1984, 11,800 tons.

October 1984

Horticultural and Tropical Products Division, FAS/USDA

Spain

Spain's 1984 almond crop, although well above last year's low level, fell substantially short of potential due to frost damage in early March and subsequent drought conditions in some of the major producing areas. Despite the larger crop, a 33-percent decline in exports is expected during the 1984/85 marketing year due to low carryin stock as well as competition from the United States. F.o.b. export prices for shelled almonds in August 1984 ranged from \$322 to \$368 per 100 kg. compared wih \$333 to \$360 per 100 kg. in 1983. Spain's major market for shelled almonds is Europe. Available trade data for calendar year 1983 are as follows:

SPAIN: EXPORTS OF ALMONDS (Metric Tons)

| Country of Destination : 1982 | 1983 |
|---|---|
| West Germany. 5,657 USSR. 5,542 Algeria. 2,400 Switzerland. 2,387 United Kingdom. 728 Others. 7,732 Total. 24,445 | 9,800 6,500 6,078 5,000 3,462 1,006 9,642 41,488 |

SOURCE: U.S. Agricultural Counselor, Madrid

Spanish almond growers and exporters benefit from various government assistance programs. Growers receive subsidized fuel and low interest loans for structural improvements, primarily for irrigation projets, as less than 10 percent of Spain's almond acreage is under irrigation. Exporters receive a 1.2 percent rebate (down from 1.5 percent last year) of the f.o.b. export value of almonds as an incentive to encourage exports. Finally, the government maintains a working capital loan fund from which exporters can borrow at a subsidized interest rate.

Italy

During the 1983/84 marketing season, Italian almond exports reached the highest level of recent years, favored both by the large crop and reduced competition from Spain and the United States in the major European markets. The chief destination for Italian exports was West Germany, followed by other EC countries. Due to both a smaller crop and keen competition, a sharp decline in almond exports is forecast for the 1984/85 marketing year.

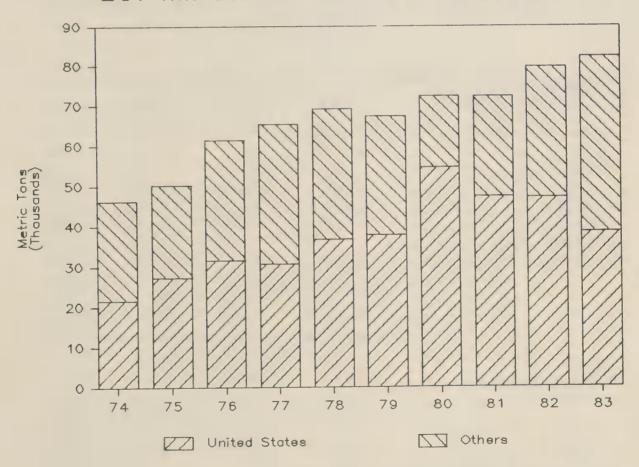

The only EC program for almonds is a subsidy for exports to non-EC countries. However, since only 10 to 15 percent of Italian almond exports are exported outside the EC, only a small share of the exports benefitted directly from this subsidy. The subsidy is 9.67 ECU/100 kg., equal to \$7.23/100 kg. at the current exchange rate, or approximately 2 percent of the world almond price.

United States

Export earnings of U.S. almonds were \$269 million in 1983/84, a 22 percent increase from a year earlier. The increase in export volume was insignificant with exports of the shelled and inshell categories dropping slightly and the prepared and preserved category registering a moderate increase. West Germany, the United States' leading customer, purchased 3 percent less in 1983/84. Shipments to most other European countries also declined. In contrast, shipments to Japan, the United States' second largest market for shelled almonds, continued to increase.

U.S. almond trade with the EC has declined slightly in recent years, although the overall volume of EC imports increased. EC imports of shelled almonds from Spain, Italy, Portugal and Greece show steady increases since 1980. The combined imports from these countries accounted for 53 percent of the total EC imports of shelled almonds in 1983.

EC: IMPORTS OF SHELLED ALMONDS

The continued slump in exports of inshell almonds is due largely to restrictive Indian import practices. However, in May of this year the Indian Government changed the import duty on almonds from 190 percent ad valorem to a specific rate of 49 rupees per kg. for inshell almonds and 64 rupees per kg. for shelled almonds. The ad valorem equivalent of the new duties, although still high, are well below the previous levels.

Opening prices in the United States for the 1984 almond crop were 20-25 percent lower than last year's opening. Selling prices range from \$1.25 to \$1.36 per pound (\$276-\$300 per 100 kg.). Trade sources consider these prices realistic in light of the record crop expected in California, world supplies that are 32 percent above 1983 levels and the record strength of the U.S. dollar versus most foreign currencies.

The United States is expected to be a formidable competitor in Europe during the 1984/85 marketing year. Export prospects are promising in light of the record California crop and the reduced supplies fom Spain.

WORLD FILBERT SITUATION

Production of filberts (hazelnuts) in the leading producing countries in 1984 is forecast to be 27 percent below the 1983 level. Smaller crops in Turkey, Italy and Spain result from the normal downturn in the production cycle after exceptionally large harvests last season. Filbert supplies in the major producing countries will be down approximately 11 percent from last season's level.

October 1984

Horticultural and Tropical Products Division, FAS/USDA

Turkey

Turkey, the leading filbert producing country, exported an estimated 17 percent more filberts in 1983/84 than in the previous year. Trade sources indicate that the large carryover stocks in Turkey will have no impact on export market supplies, as unsold stocks held by FKB at the end of a season are absorbed by the domestic market. The introduction of new products such as salted and roasted filberts has contributed to a steady increase in domestic consumption of filberts in Turkey. In addition, the practice of crushing surplus stocks for oil, though not economical, serves as a means of disposal, especially when quality deterioriation leaves stocks unsuitable for export.

An estimated 25,000 tons of filberts were crushed for oil during 1982/83 and 40,000 tons during 1983/84. It is expected that at least 50,000 tons and up to 100,000 tons of the 1983 crop inventories will be crushed for oil. (The supply and distribution table accompanying this article indicates a 70,000 ton estimate which is included within the domestic consumption category.)

The Government's marketing policy on filberts consists of a guaranteed grower price, a minimum export price (MEP) and an export tax, as outlined in the table below:

| | | | 1983/84 (U.S. Do | |
|---|---------------|---------------|---------------------|-----|
| Grower price (per kg., inshell)2/. (Shelled equivper 100 kg.) | 175 35,000 | 240 48,000 | 124 | 110 |
| Export tax (per 100 kg.) | page and ann | | 110 | 100 |
| Minimum export price (per 100 kg.) | | (| 220 | 240 |

1/ Exchange rate for converting guaranteed grower price to dollars is 282.2 Tiras per dollar in 1983/84 and 435 liras in 1984/85. 2/ The price shown is the beginning of season opening price to growers, which is adjusted upward throughout the season to compensate for inflation.

The minimum grower price is established each season by the government and is administered by its marketing agent—the Union of Filbert Marketing Cooperatives (FISKOBIRLIK or FKB). Each year FKB receives funding from the government to purchase filberts from growers. These purchases, which in recent years have amounted to about half the crop, are processed and sold for export, on the domestic market, or in the case of unused or deteriorated stocks, crushed for oil. The export tax, intended to prevent excessive price increases within Turkey, has been imposed since the 1980/81 season. The purpose of the MEP is to prevent price competition among exporters.

The Turkish National Assembly last year passed a bill aimed at limiting the expansion of filbert growing areas which have recently extended to areas more economically useful for other crops. The provisions have not yet been implemented.

Italy

Italian exports of both inshell and shelled filberts rose significantly during the 1983/84 marketing year. In particular, shelled filberts, used in the destination countries by the processing industry, during September 1983-April 1984, increased by 11.5 percent from the same period the preceding year. This occurred despite a sharp decline in shipments to West Germany, the chief Italian export market for filberts. Italian filbert exports to non-EC destinations continue to benefit from a European Community export subsidy. The

subsidy is 14.51 European Currency Units (ECU)--about \$10.91 per 100 kg. 1/ of shelled filberts (equal to about 4 or 5 percent of f.o.b. prices) and 7.50 ECU--about \$5.61 2/--per 100 kg. of inshell filberts.

The European Community represents a significant import market for shelled filberts, importing 90,147 tons in 1983. Turkey and other Mediterranean countries supplied over 99 percent of this total. Although Turkey is by far the most important supplier, EC imports from Italy show increases of 11 percent in 1982 and 32 percent in 1983.

United States

U.S. exports of shelled filberts were characterized by a significant drop of 31 percent while exports in the inshell category increased 24 percent during 1983/84, reflecting a 74 percent increase in shipments to West Germany and a 44 percent increase to Canada.

U.S. imports of shelled filberts have climbed steadily (54 percent in 1982/83, 22 percent in 1983/84) as have imports from Turkey which supplied 82 percent of imports in 1983/84. Imports from Turkey increased 42 percent in 1983/84. The 1984 filbert crop in the United States is estimated at 71 percent above the disease-damaged 1983 harvest. As a result, U.S. imports of filberts for 1984/85 are forecast to drop slightly from the previous year.

I/ Based on 1984/85 European Community green rates, an ECU equals 1,421 Italian lire. 2/ Based on September 1984 exchange rates, \$1 equals 1,890 Italian lire.

WORLD RAISIN TRADE

World raisin trade (excluding currants) has grown moderately during the past 3 decades, having risen from averages of around 270,000 metric tons per year in the 1950's to 310,000 or 320,000 tons in the 1960's and to 350,000 or 360,000 tons in the 1970's. Trade so far in the 1980's has been in the 380,000 to 400,000 tons per year range, above the 1970's average, but equal to the better years of that decade.

WORLD RAISIN IMPORTS

WORLD RAISIN IMPORTS

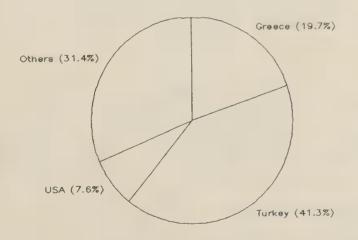

The European Community (EC), which accounted for 46 percent of world imports in 1983, is the most important destination for raisins moving in international trade. In 1983, the distribution of imports among the EC member states was as follows:

| | Metric |
|--|----------------------------|
| Country | Tons 1/ |
| United Kingdom | 44,880 19,963 15,798 |
| France Ireland Belgium-Luxembourg Denmark | 6,694 5,040 |
| Total | 179,377 |

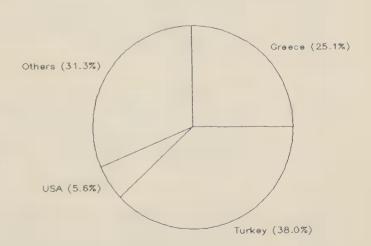

1/ Net imports. Include imports from Greece but exclude imports which are reexported to other member states.

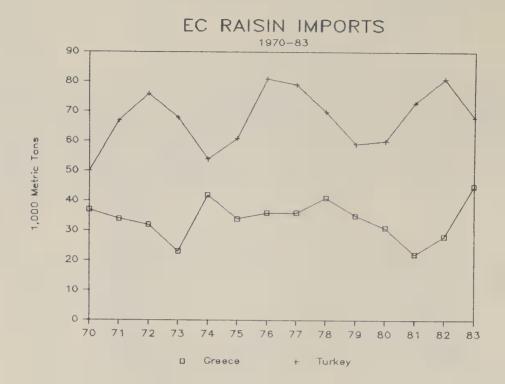

EC RAISIN IMPORTS

Average, 1973-82

EC RAISIN IMPORTS 1983

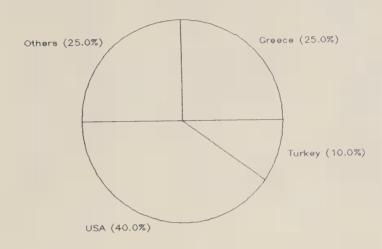

West Germany and the UK, combined, took 63 percent of Community imports. Turkey and Greece, which alone provide over 60 percent of EC imports, are the most important suppliers. These 2 countries, in turn, are highly dependent upon the EC for the disposal of their raisin crops. In 1970-80, prior to Greece's accession to the EC, the Community took an average of 84 percent of Turkey's raisin exports. Greece, which also has large outlets in Eastern Europe and the Soviet Union, sent 36 percent of its exports to the EC during the same period. Since accession in 1981 an increasing portion of Greece's exports appear to have been diverted to its EC partners.

Eastern Europe and the USSR comprise the second largest importing region for raisins. The USSR in recent years has accounted for 60 to 70 percent of the entire region's raisin imports. Afghanistan now supplies about three-quarters of Soviet raisin imports. Imports into the rest of Eastern Europe have declined in the past few years because of unfavorable economic conditions there. Before 1981 Greece apparently accounted for well over half of shipments to these countries, but since then Greece's share of the East European market has declined.

Other West European countries account for a relatively small share of world raisin imports. This group of countries is important for the United States, however, because the United States is the largest source of imports. U.S. raisins are the market leader in Finland, Norway and Sweden, but trail behind Greece in Austria and Switzerland. The United States is also the leading supplier of raisins to Japan but is second to Australia in the Canadian market.

In 1983, European countries, including the Soviet Union, absorbed 72.5 percent of world raisin imports. By adding Canada and Japan, over 85 percent of the world's imports are accounted for. The remainder of the world's imports are spread among a large number of countries, the most important of which, in ranking order, are New Zealand, Pakistan, India, Iraq, the North African countries, Brazil, other South American countries, the United States, South Korea, China and the countries of the Arabian Peninsula.

SOURCE: United States from USDA, Economic Research Service. Other countries calculated by dividing net imports by population.

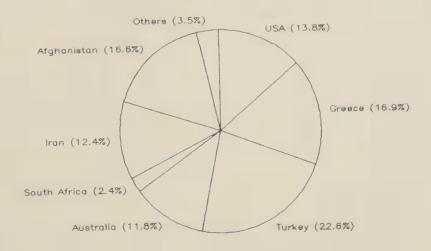

In 1973-82 the United States ranked fourth among the world's raisin exporters behind Turkey, Greece and Afghanistan. Between 1970 and 1983 the U.S. share of world trade ranged between 11 and 19 percent. The peak level was achieved in 1971. U.S. export destinations are quite diversified. In particular, the United States is much less dependent on the EC market than most other major raisin exporting countries. Japan, which took almost one-third of shipments in 1983, is the largest U.S. market. Another third of 1983 exports went to Western Europe.

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE. Mail this form to: Foreign Agricultural Service
